**Tags:** Panopticon Visualization Technology, Sybase RAP-The Trading Edition, Aleri's Complex Event Processing (CEP) Engine, Real-Time Data, Visual Analysis Interface,

Panopticon Software has partnered with Sybase, Inc. to offer an enhanced, interactive visual analysis interface for Sybase RAP- The Trading Edition. As a result, Pantopicon will connect directly to Sybase RAP- The Trading Edition as well as Sybase Aleri Complex Event Processing (CEP) engine.

Panopticon is a Stockholm based provider of data visualization software for monitoring and fast analysis of financial data.

In a statement, Stuart Grant, Business Development Manager for Sybase, said, "With Sybase RAP - The Trading Edition and CEP, we have developed a comprehensive platform for multi-frequency data management and analytics to support both large and medium-sized financial services operations. The addition of the Panopticon real-time Online Analytical Processing (OLAP) and visual analysis toolset will allow multiple user communities to achieve highly specialized yet bespoke visualization on a consistent view of data and analytics. As a result, our customers will have the tools to extract even more value from their existing Sybase platform and stay ahead of the fast-changing requirements of banks, mutual fund and hedge fund companies, particularly in the critical areas of trading, risk monitoring and analysis."

According to Willem De Geer, managing director of Panopticon, in the release, "In the banking world, it's extremely important for senior managers to have clear visibility into trading activities, associated risk exposures and profitability metrics across the enterprise. Our data analytics tools make that enterprise-wide visibility easier. This agreement with Sybase provides another example of how our software can be integrated successfully into bank and fund companies' infrastructures." The partnership will result in the combination of multi-dimensional visual analysis capabilities across real-time and historical event analytics applied to the fastest and most scalable integrated in-memory and historical analytics platform available today, according to Panopticon's release. Visualization tools can enable capital markets firms to gain more visibility into their trading activities, to identify where their risk exposures lie. They can use visualization for their quantitative analysis and risk management needs, combining streaming and intra-day analytics with historical trend analysis, notes the release. Specific applications include real-time and on-demand risk analysis, pre-trade analytics, market monitoring, trading, market liquidity analysis (MLA), liquidity management, plus business profitability analytics.
