## A-Team Insight: MARKET DATA INSIGHT

### OneMarketData Enters into Strategic Partnership with Panopticon

24 Oct 2011 FREE

Panopticon Software, the major provider of visual data analysis software for real-time, CEP and historical time series data, today announced that OneMarketData, a leader in tick data management and analytics is partnering with Panopticon to bring Panopticon's real-time data visualizations to its OneTick CEP and Database (OneTick), the single solution for tick data management, analytics and complex event processing (CEP).

The combination allows traders and analysts to make OneTick queries that can easily traverse massive volumes of data and spot correlations and outliers. OneTick is optimized for high-frequency time series data, including trading and market price feeds. It captures, compresses, archives and provides uniform access to global historical data, providing a single solution for tick data management that spans both historical and real-time. Panopticon's unique StreamCube OLAP data model connects directly to OneTick to provide users with effective, easy-to-interpret visualizations of the data stored in OneTick in combination with other sources. The system reduces the amount of time required for people to identify opportunities and issues allowing them to take more time to develop actionable strategies.

Willem De Geer, Panopticon's Managing Director, said, "OneTick's analytical tools are a powerful combination with Panopticon. Clients can run historical simulations and back-tests, develop trading and market-making strategies, build transaction-cost models, perform real-time surveillance, answer regulatory compliance requirements and visualize the results very quickly. Our visualization capabilities combined with OneTick make it an excellent solution for hedge funds, mutual funds, banks, brokerages, market makers, data vendors and exchanges."

Richard Chmiel, Vice President for Global Sales and Marketing of OneMarketData stated, "With 80% of information processing attained visually, we recognize the importance of a solid user interface to help clients make more effective use of the vast amounts of market data available in OneTick. Panopticon's ability to handle real-time data provides our clients with the most productive system available for analyzing market feeds and trading data, leaving them with more time to create their financial trading models and to bring faster, more robust and stable strategies into the market."
